In the claims:

Please amend claims.

1. (PREVIOUSLY AMENDED) A method of raising the blood sugar level in a mammal having hypoglycemia by reducing degradation of glucagon, said method comprising administering to said mammal a therapeutically effective amount of an effector for reducing enzymatic activity of dipeptidyl peptidase (DP IV) and DP IV-analogous enzymes.

- 2. (ORIGINAL) The method of claim 1, wherein the blood sugar level in the serum of mammalian organisms is raised above the glucose concentration characteristic of hypoglycemia.
- 3. (PREVIOUSLY AMENDED) The method of claim 1, wherein the effector is selected from the group consisting of DP IV enzyme inhibitors, substrates of DP IV, pseudo-substrates of DP IV, inhibitors of DP IV expression, proteins that bind DP IV or antibodies to DP IV and combinations thereof.
- 4. (PREVIOUSLY AMENDED) The method of claim 1, wherein the effector for reducing enzymatic activity is employed together with glucagon or analogues thereof.
- 5. (PREVIOUSLY AMENDED) The method of claim 1, wherein the effector for reducing enzymatic activity is employed in combination with physiologically acceptable adjuvants and/or excipients.

6. (CURRENTLY AMENDED)

A method of raising the blood sugar level in a mammal having hypoglycemia by Amethod for stimulating endogenous glucose production via glucagon stabilization in a mammal comprising the step of administering to said mammal a therapeutically effective amount of Dipeptidyl peptidase IV inhibitor in a pharmaceutically acceptable preparation for reducing in said mammal the enzymatic activity of endogenous DP IV and thereby reducing degradation of glucagon.

7. (CURRENTLY AMENDED) A method of raising the blood sugar level in a mammal having hypoglycemia by reducing degradation of glucagon, said method comprising administering to- said mammal a therapeutically effective amount of a compound having a means for modulating influencing enzymatic activity of dipeptidyl peptidase (DP IV) and DP IV-analogous enzymes.

- 8. (PREVIOUSLY ADDED) The method of claim 7, wherein the blood sugar level in the serum of mammalian organism is raised above the glucose concentration characteristic of hypoglycemia.
- 9. (PREVIOUSLY ADDED) The method of claim 1, wherein said compound is selected from the group consisting of DP IV enzyme inhibitors, substrates of DP IV, pseudo-substrates of DP IV, inhibitors of DP IV expression, proteins that bind DP IV or antibodies to DP IV and combinations thereof.
- 10. (CURRENTLY AMENDED) The method of claim 7, wherein said means for modulating influencing enzymatic activity is employed together with glucagon or analogues thereof.
- 11. (CURRENTLY AMENDED) The method of claim 7, wherein said means for modulating influencing enzymatic activity is employed in combination with physiologically acceptable adjuvants and/or excipients.
